

SAFE PARTNERSHIP

HD Video Doorbell

The Safe Partnership video doorbell PIR triggered and can record at nighttime, and can be linked to an independent app without the need for a costly ongoing subscription.

However, it can also be used without Wi-Fi and will record evidence quality images to an SD card within the doorbell. This has proved especially useful in cases where there are additional orders being sought, or in cases where the perpetrator is ignoring orders that are in place.

The Safe Video HD Doorbell comes with a plug in chime for normal doorbell use. There are no wires, ideal for temporary accommodation or private landlord properties.

This Safe Video doorbell records in Full HD and night vision, but isn't reliant on an app. It has PIR Detection which covers up to 5m. Most importantly it doesn't need a paid subscription or WIFI as it records directly onto 32GB SD card (included & fitted)

The Safe Video Doorbell is battery operated and recharged with a micro USB cable. Full charge should last approximately 6 months it also has two way audio with a built in microphone and speaker.
